QUESTIONS

1. What have scientists been warning us about for decades?
2. What did large, profit-seeking commercial fleets develop for finding, extracting, and processing their target species?
3. What benefits have large, profit-seeking commercial fleets brought to millions of people?
4. How many tons of fish were taken from the ocean in 1989?
5. As populations of large-fish have drastically declined, how did commercial fleets change their practices for viable catches?
6. What is particularly vulnerable to the effects of overfishing?
7. As fish eat algae, keeping the coral clean and the ecosystem in balance, what happens to the coral?
8. What are some things that could physically damage coral?
9. What is caught by trawling?
10. What specific animals are mentioned in the passage as facing existential threats as bycatch?
